Project Summary for an Application from
Meyercord Revenue Company for the
Federally Enforceable State Operating Permit (FESOP) Renewal for
475 Village Drive, Carol Stream, DuPage County

Site Identification No: 043020ACH
Application No.: 01050092

Schedule

Public Comment Period Begins: May 23, 2014
Public Comment Period Closes: June 22, 2014

I. INTRODUCTION

Meyercord Revenue Company currently operates under federally enforceable state operating permit (FESOP) which has expired. The company requested a renewal of their FESOP to continue to operate as non-major source for the purposes of the Clean Air Act Permit Program (CAAPP). This plant requires an air pollution control operating permit because it is a source of emissions. The Illinois EPA has prepared a draft of the renewed permit that it would propose to issue for the plant. However, before issuing the permit, the Illinois EPA is holding a public comment period to receive comments on this proposed action and the terms and conditions of the draft permit that it would propose to issue.

II. SOURCE DESCRIPTION

Meyercord Revenue Company operates label printing facility comprised of one rotogravure printing press and three small Ink-Jet printing presses. The inks are applied to the web of paper substrate. Some of the ink have final adjustments made locally. Various organic solvents are used in the ink mixing and in clean-up operations. The principal air contaminant emitted from the facility is Volatile Organic Material (VOM), generated during the ink application and from solvents usage. Some of the organic solvents may contain hazardous air pollutants (HAP).

III. GENERAL DISCUSSION

Federally Enforceable State Operating Permits (FESOPs) are federally enforceable, that is, the terms and conditions of the permits can be enforced by USEPA under federal law, as well as by Illinois government and the public under state law. These permits can establish federally enforceable limitations on the operation and emissions of a source that restrict the potential emissions of the source.

The source has to operate this plant under a FESOP because the actual emissions of the plant are below the levels at which the plant would be considered a major source under Title V of the Clean Air Act and regulations promulgated thereunder. However, in the absence of federally enforceable limitations, the plant's potential emissions would be such that the plant would be considered a major source for this program. The permit acts to restrict the plant potential emissions so that it need not be considered a major source. As a result, the source does not need to obtain a Clean Air Act Permit Program (CAAPP) permit for the plant, as would otherwise be required.

The FESOP limits the operation and annual emissions of the plant to below the major-source-thresholds of 10 tons for an individual HAP and 25 tons for combined HAPs.

IV. APPLICABLE EMISSION STANDARDS

All emission units in Illinois must comply with state emission standards adopted by the Illinois Pollution Control Board. These emission standards represent the basic requirements for sources in Illinois. The board has specific standards for units emitting volatile organic material in the Greater Chicago area, e.g., 35 IAC, Part 218, Subpart E – Solvent Cleaning, Subpart F – Coating Operations, Subpart H - Printing Operations.

Printing and paper coating operations performed on rotogravure printing presses are eligible for exemption from emission standards of 35 Ill. Adm. Code 218 Subpart H due to restriction of VOM emissions below 25 tons per year but are subject to general VOM emission limitation found in 35 IAC 218.301 – Use of Organic Material.

Ink-Jet printing presses are eligible for exemption from 35 Ill. Adm. Code 218 Subpart TT applicability due to permit limits on VOM emission from these presses below applicability threshold of 25 tons/yr.

The application shows that the plant is in compliance with applicable state and federal emission standards.

V. CONTENTS OF THE PERMIT

The permit that the Illinois EPA is proposing to issue would identify the specific emission standards that apply to the emission units at the plant. As explained, the non-coating equipment cleaning operations are subject to 35 IAC 218.187 control requirements, which restricts VOM content of cleaning solutions. Rotogravure printing operations are exempt from 35 IAC 218.401 control requirements. The Ink-Jet printing presses are exempt from 35 Ill. Adm. Code 218 Subpart TT. The conditions of this permit are intended to ensure that the source continues to comply with applicable emission standards.

The permit would also contain limitations and requirements to assure that this plant is operated as a non-major source. The permit would limit the operation and annual emissions of the plant to below the major-source-thresholds of 100 tons for VOM, 10 tons for an individual HAP and 25 tons for combined HAPs. (Annual emissions of other pollutants from the plant are well below the 100 ton major source threshold.)

The permit conditions would also continue to require appropriate compliance procedures, including inspection practices as well as recordkeeping and reporting requirements. The source must carry out these procedures on an on-going basis to demonstrate that the plant is being operated within the limitations set by the permit and the plant's emissions are being properly controlled.

VI. REQUEST FOR COMMENTS

It is the Illinois EPA's preliminary determination that the source has met the requirements for renewal of its permit. The Illinois EPA is therefore proposing to renew the permit.

Comments are requested on this proposed action by the Illinois EPA and the proposed conditions on the draft permit. If substantial public interest is shown in this matter, the Illinois EPA will consider holding a public hearing in accordance with 35 IAC Part 166.
